DOD WebSDR Training

User Instructions for an Internet-
based Tool for Submission and
Processing of Supply Discrepancy
Reports (SDRs)

What Is A SDR?

- A Supply Discrepancy Report (SDR) is a tool used to report **shipping** or **packaging** discrepancies attributable to the responsibility of the shipper, (including Government sources, contractors/ manufacturers or vendors) and to provide appropriate responses and resolution.
- The purpose of this exchange is to determine the cause of such discrepancies, effect corrective action, and prevent recurrence.

SDR Program

- The supply discrepancy reporting program is designed to promote evaluation, correction, and improvement of logistics operations.
- To assist DoD Components in their SDR quality programs that will include periodic reviews to assess the accuracy and quality of work processes applicable to supply discrepancy processing.
- Data collected enables DOD to:
 - Identify trends
 - Establish volume and dollar values of SDRs
 - Bring management attention to problems with shipping activities as necessary
 - Improves the requisitioning and distribution process within logistics operations
- Official SDR guidance is located in the Defense Logistics Management System (DLMS) Manual, DoD 4000.25-M, Vol II, Chapter 17:
<http://www.dla.mil/j-6/dlmso/elibrary/manuals/dlms/v2.asp>

SDR Submission

- Report item discrepancies which exceed \$100 per line item or for any dollar value when:
 - Shipper is DLA or GSA
 - Quantity is discrepant for Controlled Inventory Items (classified/sensitive), arms, arms parts, ammunitions, explosives
 - Total nonreceipt (when not shipped via traceable means or not transportation related)
 - Incorrect item is received
 - Duplicate shipment
 - Documentation is missing
 - Misidentification of item under Unique Item Tracking (UIT) program

SDR Submission

- Report packaging discrepancies where estimated/actual cost of corrective packaging exceeds \$100 or the value of the item, shipment, or package exceeds \$2,500. Report packaging discrepancies involving hazardous material for any dollar value when a potentially hazardous condition could result.
- Regardless of dollar value, report immediately packaging discrepancies resulting in damaged material which may endanger life, impair combat or deployment operations, or effect material.
- Packaging discrepancies include:
 - Improper packing
 - Improper preservation
 - Improper marking
 - Improper unitization
- WebSDR supports very detailed discrepancy codes to encourage better understanding of the discrepant condition and follow-up analysis.

SDR Submission

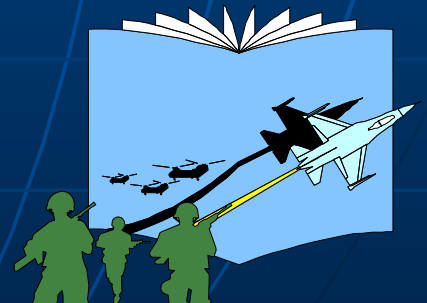

- SDR submission timeframes are:
 - For shortage or overage in controlled inventory items (classified/sensitive), arms, arms parts, ammunitions, and explosives, report within 24 hours of discovery
- All other discrepancies:
 - CONUS destinations: 90 days from shipment
 - Overseas destinations: 150 days from shipment
 - Late submission: Explain reason for delay; SDR may be processed for information only

Why WebSDR?

- The SDR transformation initiative is designed to move SDRs into an integrated electronic transactional environment within the framework of a standard logistics information exchange under the Defense Logistics Management System (DLMS).
- The goal is to provide an effective means to report, resolve, and measure discrepancies related to pipeline performance while reducing paper and manual intervention.
- The derivative benefits of the initiative include: near real time SDR reporting for immediate identification and more speedy resolution of reported discrepancies; enabling Perfect Order Fulfillment computations; facilitating of interoperability internal and external to DoD; and maximizing the economy, efficiency, effectiveness of the reporting process.

What is the DLMS?

- The Defense Logistics Management System is a broad base of business rules, data standards and electronic business objects (information exchange forms) designed to meet DoD's requirements for total logistics support.
 - Accommodates the legacy data content & business processes, while supporting future processes and data exchange requirements
 - DLMS encompasses all of the MILS systems and other inter-Component fixed record position transactional exchanges

More about the DLMS

- Includes procedures, data standards, code lists, metrics, policies, paper forms, and transaction formats [*e.g., the SF 364, Report of Discrepancy*]
- Business objects are supported by commercial standards. Currently consists of DLMS Supplements (DSs) for 61 Federally-approved implementation conventions (ICs) that use 26 ASC X12 transaction sets [*e.g., the 842A, Standard SDR*]
- Pledged to support emerging EB technologies – Extensible Markup Language (XML), enterprise resource planning (ERP) software solutions, etc.
- Maintains capability to communicate standard system logistics information requirements while expanding to support new initiatives such as: Unique Identification (UID); Radio Frequency Identification (RFID); Performance Based Logistics (PBL)

WebSDR Goals

- Quicker Response/Less Effort
 - Reduces delays resulting from misrouted SDRs or mailed documents
 - Electronic interface eliminates data entry at action activity
- Facilitated web-based entry available
 - Auto-fill feature uses DAAS requisition history to populate SDR
 - Data content targeted to specific discrepant condition
 - May be used by Military Services/Agencies (individual Service rules may differ)
 - Contractors may use for discrepancies related to Government Furnished Material
- Transaction exchange through logistics hub
 - ILCOs (using AFSAC pilot) will interface with the DAAS/WebSDR on behalf of FMS customers
 - DoD Component processing systems will interface with DAAS on a staggered implementation schedule

Developers of WebSDR

- WEBSDR developers consist of members of a multi-component development team to work in collaboration to establish new SDR business process rules, and procedures that will enable DoD to automate supply discrepancy reporting on a global enterprise level.
 - The Defense Logistics Management Standard Office (DLMSO)
 - Defense Automatic Addressing System Center (DAASC)
 - DOD Defense Logistics Agency (DLA)
 - Distribution Depots (DLA)
 - US Army
 - US Navy
 - US Air Force
 - US Marines
 - International Logistics Control Offices
 - General Services Administration (GSA)
 - Defense Reutilization and Marketing Office (DRMO)

**Business Object: DLMS 842A
derived from SF 364**

- Modernized systems will use business objects to transmit SDRs:
 - Includes data fields from the original SF 364
 - DLMS codes to support transactional exchange
 - Component-unique data requirements
 - Place holders for future enhancements, e.g., UID

[illegible][illegible]

PUBLISHED OR PRINTED NAME, TITLE, AND PHONE NUMBER OFFERING	OFFICIAL	MO. SAVING TIMES
INFORMATION ON THIS OFFERING		

Business Object: DLMS 842A

DLMS Supplement to FED IC

DoD 4000.25-M

- Primary business object documentation is the DLMS Supplement (DS):
 - The DS establishes the DoD standard format for an electronic equivalent of the SF 364/SDR.
 - The DS provides specific business rules, conditions, and authorized codes necessary for appropriate use of this IC within the DLMS.
 - Used to replace Component unique formats and paper form.

DLMS Supplement to FED IC: 25M Supplement SDR

842 Nonconformance Report

Functional Group=NC

This DoD Standard for Field Use contains the format and establishes the data contents of the Nonconformance Report Transaction Set (842) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report products and processes that do not fulfill specifications or requirements. The Nonconformance Report Transaction Set provides the ability for the sender to report the nonconformance at the level of detail that is requested. It also provides the ability to report the specific **corrective actions** of a component(s) while identifying the assembly or the product that is in nonconformance. The Nonconformance Report Transaction Set may be used to report initial, or requested actions related to the nonconformance being reported. Financial and accounting information is provided for reporting purposes only. The Nonconformance Report Transaction Set has the capability to report the cause of the nonconformance and to state the proposed action to be followed to prevent a repetition of the problem.

For AUC/AS please see highlighted button on pages 2, 3, 4, 12-13, & 25.

Note 1:

201001	The HL levels are item, component, product characteristics, report, and use of number. Valid HL Parent-Child relationships are 1) item - component, 2) item - product characteristics, 3) component - product characteristics, 4) report - item, 5) item - use of number, and 6) component - use of number.
201002	The HL levels are item, component, product characteristics, report, and use of number. Valid HL Parent-Child relationships are 1) item - component, 2) item - product characteristics, 3) component - product characteristics, 4) report - item, 5) item - use of number, and 6) component - use of number.

Federal Note:

- Use a single occurrence of this transaction set to transmit single complaint transaction for a single or multiple organizations.
- DoD logical users should refer to the Defense Logistics Management System (DLMS) Supplement to the Federal Implementation Convention (FIC) available at URL: <http://www.dls.mil/ndms>. The DLMS Supplement provides specific business rules, conditions, and authorized codes necessary for appropriate use of this FIC when the DLMS.

DLMS Note:

- The DLMS Supplement (DS) provides the DoD standard format for SDR submission. In addition, it specifically designed to transmit complaint transactions originated within DoD Web SDR program to the appropriate action authority and distributed copy recipients.
- The reply to the SDR will be carried within the SF 342A/R.
- Users operating under the Defense Logistics Management System (DLMS) must reference the Unit of Issue and Purchase Unit Converter table which can be found on the Defense Logistics Management Standards Office (DLMSO) web site at <http://www.dls.mil/ndms>.
- The transaction may be used to report unique identification (UID) information. Refer to the UID web at URL: <http://www.ssg.af.mil/uid/> for DoD policy and business rules.
- The DLMS Supplement incorporates the Proposed DLMS Change and Approved DLMS Change (AUC) listed. PO DODCs are available from the DLMSO website <http://www.dls.mil/ndms>.

- POE 113, Revised SF 342A/R Standard SDR for Enhanced Functionality and UID
- ADE 101, DLMS mapping for Standard SDR-DOO Web SDR Output, SF 342A/R
- ADE 104, DLMS Supplement (DS) 342A/R: DoD Standard SDR Reply and Additional Data Content for the SDR Report
- ADE 128, Revisions for SDR Transaction Exchange (Format, Codes, and UID)
- ADE 131, Revisions for SDR Transaction Exchange Supporting SA and Miscellaneous Administrative Changes
- ADE 144, SDR Transaction Exchange Business Rules

Heading:

Feb 26 03, 2006

WebSDR Implementation Approach

Phased implementation with initial operating capability (IOC) as follows:

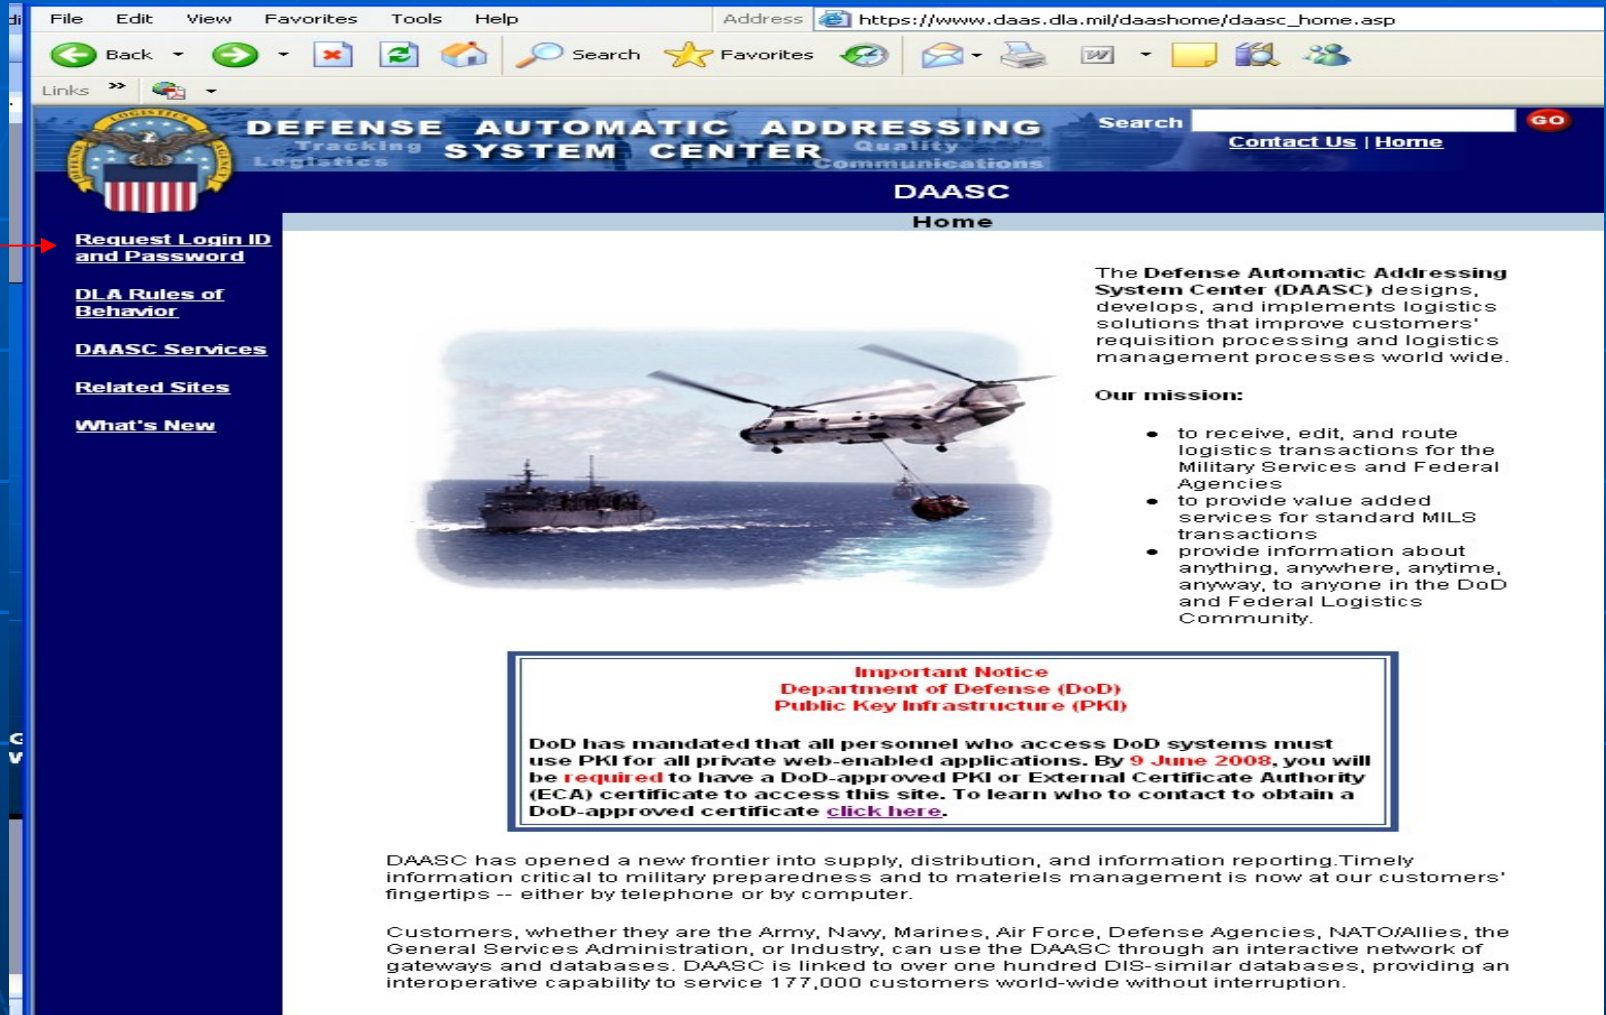

- Ability to receive and pass SDR information using transactional exchange (business objects)
- Ability to create SDR via DoD WebSDR (submission, follow-up, change, cancel, reply, request reconsideration)
- Ability to convert transactions and screen inputs to emails and forward to all parties requiring email support
- DoD SDR data base
- Query capability, future reporting capability

WebSDR Access

- Access to WEBSDR may be obtained by completing an online System Access Request (SAR), from the DAASC WWW Site:
<https://www.daas.dla.mil>
- **Help Desk Support:**
Commercial: (937) 656-3247
DSN: 986-3247
FAX: (937) 656-3800/3801 or 986-3800/3801
You may also email: websdrhelp@dlam.mil
- Defense Automatic Addressing System Center (DAASC) Customer Services may be contacted 24 hours a day, 7 days a week. Calls outside the support hours need to be identified as to the seriousness of the call. All non-critical calls will be addressed the following business day.
- The DLA Customer Interaction Center (CIC) is also available for customers seeking assistance with DLA-sponsored discrepant shipments. CIC staff is available to take your call 24 hours a day, 7 days a week:
Toll Free DLA Customer assistance, 1-877-352-2255 (1-877-DLA-CALL) or DSN 661-7766
Customer Communications e-mail address: dlacustomercenter@dlam.mil

WebSDR Access

The screenshot shows a web browser window with the address bar displaying https://www.daas.dla.mil/daashome/daasc_home.asp. The website header features the DAASC logo and the text "DEFENSE AUTOMATIC ADDRESSING SYSTEM CENTER" with subtext "Tracking Logistics" and "Quality Communications". A search bar and "Contact Us | Home" links are also present. A left sidebar contains several links: "Request Login ID and Password", "DLA Rules of Behavior", "DAASC Services", "Related Sites", and "What's New". A red arrow points to the "Request Login ID and Password" link. The main content area includes a large image of a helicopter over a ship, a mission statement, and a boxed "Important Notice" regarding DoD PKI requirements. The notice states that by 9 June 2008, users must have a DoD-approved PKI or External Certificate Authority (ECA) certificate to access the site, with a link to obtain one. Below the notice, a paragraph describes DAASC's role in supply, distribution, and information reporting, and another paragraph lists the various military and industrial customers served.

DEFENSE AUTOMATIC ADDRESSING SYSTEM CENTER
Tracking Logistics Quality Communications

DAASC Home

The **Defense Automatic Addressing System Center (DAASC)** designs, develops, and implements logistics solutions that improve customers' requisition processing and logistics management processes world wide.

Our mission:

- to receive, edit, and route logistics transactions for the Military Services and Federal Agencies
- to provide value added services for standard MILS transactions
- provide information about anything, anywhere, anytime, anyway, to anyone in the DoD and Federal Logistics Community.

Important Notice
Department of Defense (DoD)
Public Key Infrastructure (PKI)

DoD has mandated that all personnel who access DoD systems must use PKI for all private web-enabled applications. By **9 June 2008**, you will be **required** to have a DoD-approved PKI or External Certificate Authority (ECA) certificate to access this site. To learn who to contact to obtain a DoD-approved certificate [click here](#).

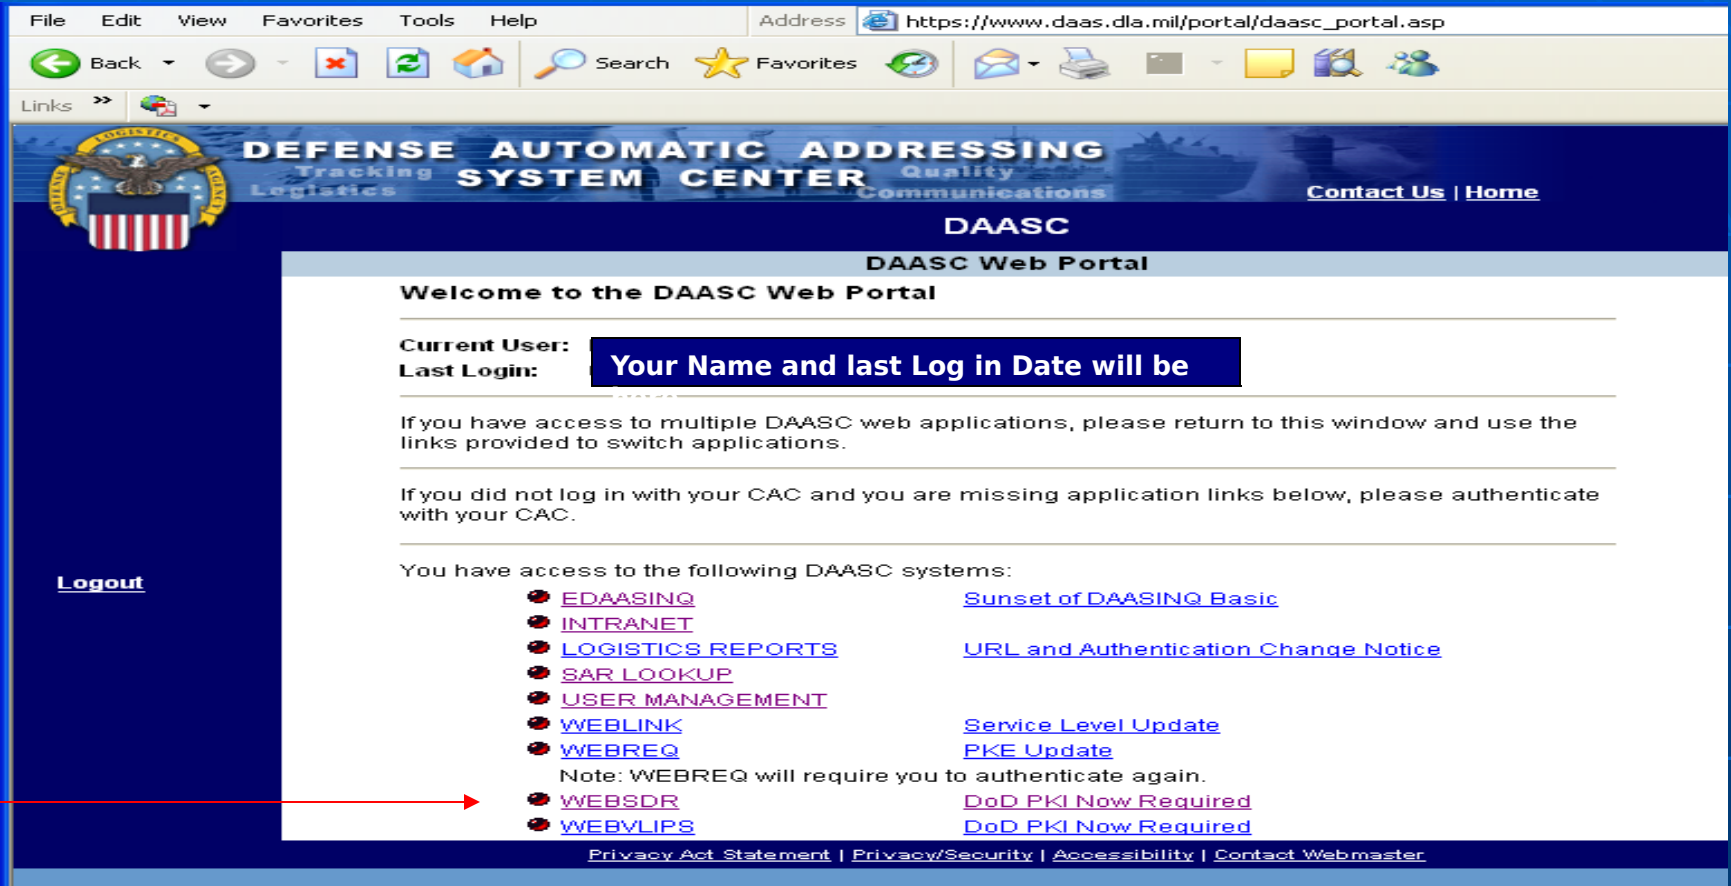

DAASC has opened a new frontier into supply, distribution, and information reporting. Timely information critical to military preparedness and to materials management is now at our customers' fingertips -- either by telephone or by computer.

Customers, whether they are the Army, Navy, Marines, Air Force, Defense Agencies, NATO/Allies, the General Services Administration, or Industry, can use the DAASC through an interactive network of gateways and databases. DAASC is linked to over one hundred DIS-similar databases, providing an interoperative capability to service 177,000 customers world-wide without interruption.

Go to <https://www.daas.dla.mil> and click on "Request Login ID and Password"
Click WEBSDR. After receipt of the logon ID and password, you are authorized to use WebSDR.

How to Submit a SDR using DoD WebSDR

Log On to WebSDR

Go to <https://www.daas.dla.mil/portal> or <https://www.daas.dla.mil/websdr> to use the DoD WebSDR application. DoD WebSDR is Public Key Enabled (PKE), you will see the portal page. Click on WEBSDR (each users system will show different systems available)

Supply Discrepancy Reporting (WebSDR)

What is DoD WebSDR?

This is the Department of Defense's Supply Discrepancy Reporting (SDR) system created by the Defense Logistics Agency (DLA). The Defense Automatic Addressing Service Center (DAASC) is responsible for the development and support of this project.

The goal of WebSDR is to move SDRs into an integrated transactional environment thereby providing an effective means to report and measure discrepancy related data and pipeline performance and to help achieve near real time SDR reporting, enable Perfect Order Fulfillment computations, facilitate interoperability internal and external to DoD, and maximize the economy, efficiency, effectiveness of the reporting process.

[WebSDR Training Slides](#)

During the form submittal process, any input item with the required icon is a mandatory entry and will be checked for proper entry.

Use of a JavaScript enabled browser is recommended.

Help Desk Support:

Begin by selecting "New" under "Submit an SDR" from the left side of your screen. A list of possible SDR actions show: New, Cancellation, Update or Correction, Follow-up, and Request for Reconsideration. We will walk through each of these processes. But first, we will initiate a new SDR to report a shipping discrepancy.

You must enter the requisition document number to access DAAS historical requisition information available for most shipment types.

Notice that a unique "WebSDR Control Number" is auto-assigned. If your local procedures include use of a control number configured differently, you may also include it as your "Customer Control Number." Both numbers will be retained for the life of the SDR.

Also identify the "SDR Type" as Shipping (e.g., shortage, wrong item), Packaging (e.g., packing, preservation, passive RFID), or Dual (both shipping and packaging discrepancies)

WebSDR Training Updated May 28

SDR Submittal Process

The screenshot shows a web application interface for SDR submittal. On the left is a dark blue sidebar with white text links: [Reconsideration](#), [Supply Source/Shipper Disposition Reply](#), [Queries](#), [Agency/Service Research Queries](#), and [Logout](#). The main content area has a white background. At the top, it says 'SDR Document/Shipment Type ?' next to a dropdown arrow. The dropdown menu is open, showing a list of options: '7 - Customer originated, depot shipment' (highlighted), '6 - Customer originated, direct vendor delivery', and a separator line. Below the separator are several codes with descriptions: '7/D - DRMS donated material', '7/R - DRMS reutilization', '7/F - DRMS transferred material', '7/S - DRMS sale', '7/L - DRMS DEMIL', '7/P - DRMO SDR, depot shipment', and '7/O - Other DRMS shipment'. Another separator line follows. Below that are more codes: 'N - Storage site receipt, depot shipment (RDO)', 'P - Storage site receipt, vendor delivery (new procurement)', and 'A - Storage site receipt, customer return/other'. A final separator line is present. Below the last separator are the codes 'V - Lateral redistribution under TAV rules'. At the bottom of the main content area, there is a small text note: 'This site was last reviewed/updated on November 14, 2006'.

Identify the “SDR Document/Shipment Type.” Customer-submitted SDRs generally fall into two types: “7” for depot or lateral DoD stock shipments, or “6” for shipments made directly from the vendor. If you received Supply Status BZ or BV, your material was shipped directly from the vendor. Other SDR Document/Type Codes are to be used only with prior coordination and training.

U.S. Forces may disregard the remaining entry blocks, as these are reserved for SDRs related to Security Assistance (Foreign Military Sales) customers..

Click on “CONTINUE” after each screen to move forward.

Multiple shipment
TCN & quantity
shipped displayed
as WebVLIPS
hyperlink

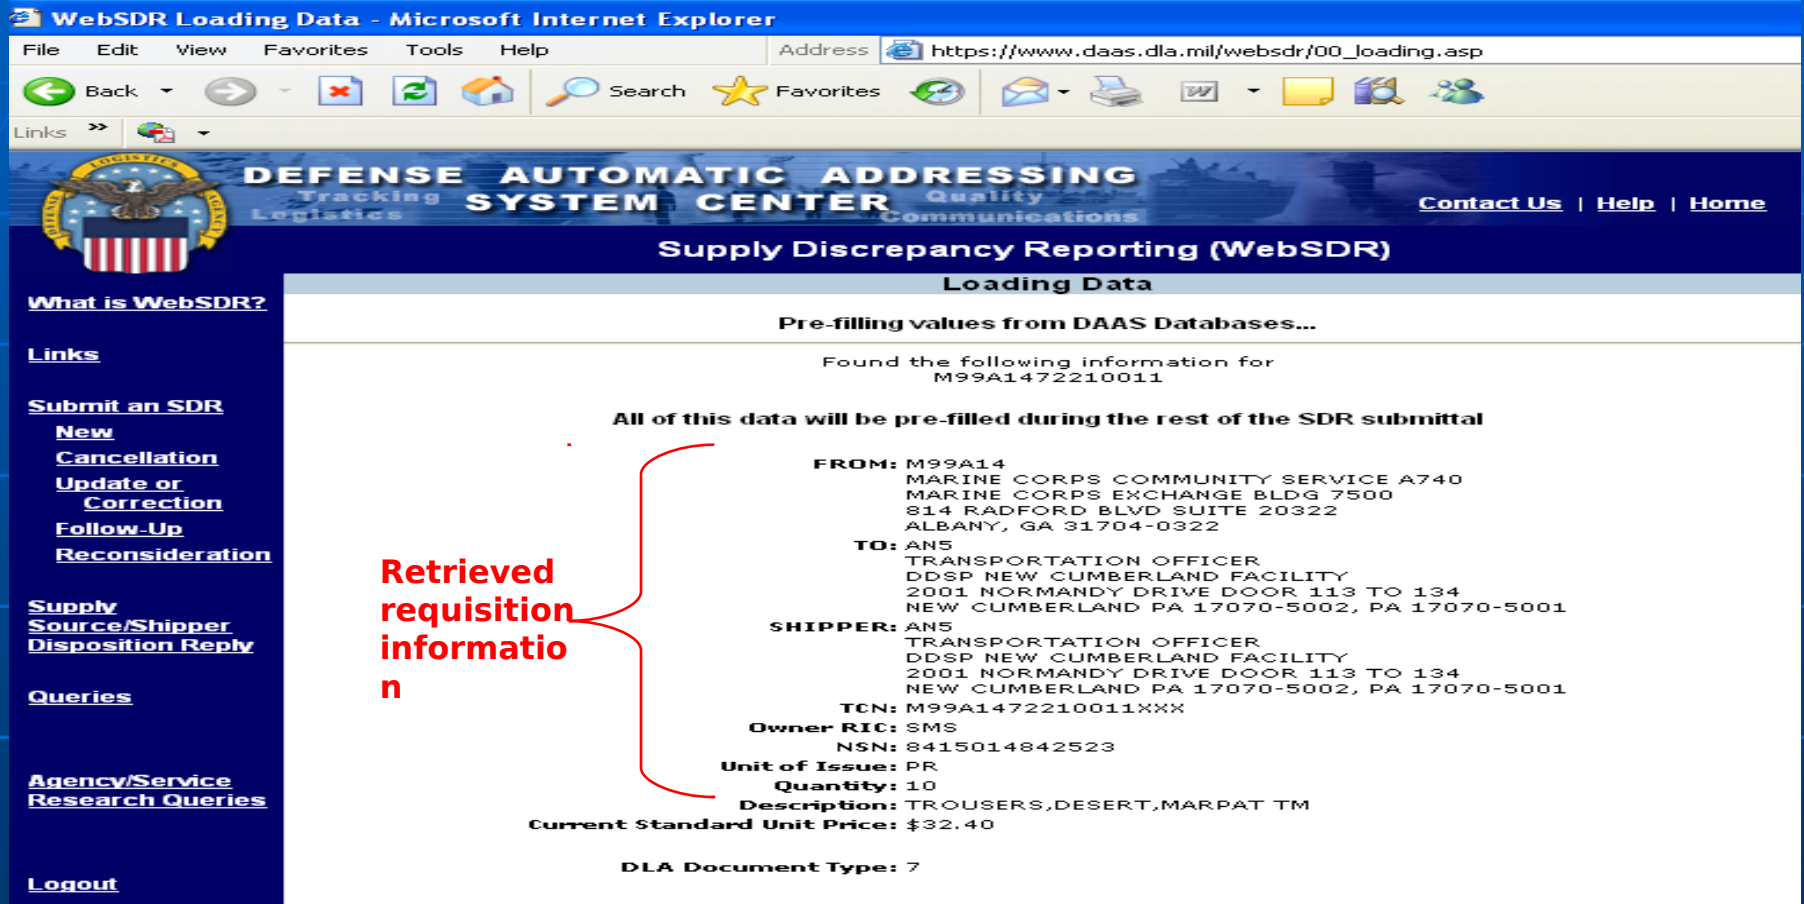

Select
shipment TCN
in drop box

Often, WebSDR will find multiple (partial or split) shipments matching the document number. It will be up to the user to select the correct shipment. At this point, you have several choices: (1) You may select the Transportation Control Number (TCN) query into WebVLIPS (which provides a complete history for this shipment). (2) You may select the appropriate shipment using the TCN drop box and click to "CONTINUE." (3) You may "START OVER" if you realize the document number is not correct.

What are Partial or Split Shipments?

- The Source of Supply (SoS) may create a “split shipment” to fill requisitioned quantity when using multiple shippers or because not all of the material is immediately available. SoS split shipments are easily recognized by the document number suffix.
- The Distribution Depot (DD) may create separate shipments when individual pieces of the SoS-directed shipment may be separated during shipment (for convenience of the DD or to prevent delays). Each shipment is assigned a unique TCN by using a Partial Code in the 16th position of the TCN. Each of these partial shipments will have the same requisition document number (and suffix when used). If there is no partial action, the 16th position will be an X.
- A subsequent trans-shipment activity, such as a port, may “split” a shipment, moving each forward as a distinct shipment. This is identified by a “Split TCN Suffix” in the 17th position of the TCN.

SDR Submittal Process

WebSDR will automatically pre-fill much of the shipping and requisition information for you. This information is taken from DAAS history files. In some cases, you may overwrite the pre-filled information such as correcting the clear text address associated with your DoDAAC.

You may now select the discrepancy code(s) applicable to the report. At least one discrepancy code must be entered, and a maximum of three may be entered. Due to the long list of available discrepancy codes, the codes are grouped according to categories. Sub-groupings within each category are used to clearly define the discrepant condition.

Incorrect Item Received Information

NSN: 1 2

CAGE-Part Number: 1 2

Description: 1 2

Manufacturers Name: 1 2

Qty Received: 1 2

Condition Code: 1 2

Reset Continue

The incorrect item received must be identified by
1) NSN;
2) CAGE and/or Part Number;
3) by description
If you do not know the NSN or Part Number, you must cite
the word "UNKNOWN" in the entry field for part number.

Incorrect item received discrepancy screen view

Based on the discrepancy code you selected, WebSDR will automatically determine if unique information specific to the discrepant condition is required.

For example, if you select a discrepancy code of "C2" for an expired shelf-life discrepancy, or a "W1" for an incorrect item received discrepancy, WebSDR will provide an additional screen for you to enter in the associated shelf life information or specific incorrect item received information.

Supply Discrepancy Reporting (WebSDR)

Submittal for Requisition M99A1472210011

Expired Shelf Life Data

Manufacturer Name ?

CAGE ?

Date Type ☒ Expiration ?

Date (MM/DD/YYYY) ?

Date Type ☐ Inspection ?

Date (MM/DD/YYYY) ?

You may report receipt of material for which the shelf-life either has expired (Type I non-extendible item) or the inspect/test date has lapsed (Type II extendible item), regardless of dollar value.

Special Instructions for Type II items:

- For DoD-managed items: Prior to submitting an SDR, access the DoD Shelf-Life Extension System (SLES) through the DoD Shelf-Life Program website at: <http://www.shelflife.hq.dla.mil/> or through the shelf life program secure site if you have a .mil address.
 - Type II items requiring laboratory test: Query the DoD Quality Status Listing (QSL) to determine if the specified Type II item is listed as having passed the required laboratory testing and has been extended. Items that are listed on the QSL as passed may be extended and remarked accordingly if the item has been stored in accordance with its storage standard. For items not on the QSL, prior to submitting a SDR, contact the DLA CALL CENTER at 1-877-DLA-CALL if the shipment originated from a DLA Storage Activity.
 - Type II items requiring visual inspection: Query the Materiel Quality Control Storage Standards for the specified Type II item, perform visual inspection in accordance with the items storage standard, and extend and remark if the item has been stored in accordance with its storage standard. If the item fails the visual inspection, dispose of IAW local procedures.
- For GSA-managed items: Prior to submitting an SDR, contact the GSA Shelf-Life HOTLINE at 1-209-547-8613 to determine if the inspect/test date has been extended.
- If you have not already determined whether the Type II shelf-life has been extended, you may do so now. You may leave this SDR in an incomplete status while you check. When you return to DoD WebSDR, you may locate your incomplete SDR using the Query function. Incomplete SDRs will be retained for 14 days.

Use date field drop boxes:

Expiration date or date packed

Date inspected or date tested

WebSDR has pre-filled the information from the requisition and shipping history.

Notice that the system pre-filled the addresses as listed in the DoD Activity Address File (DODAAF). WebSDR has also determined that the correct action activity for this SDR is DLA DDSP New Cumberland "AN5."

Did you notice the blue question mark box **?** above? These indicate that help information is available, including definitions and special rules. Just click to view.

SDR Submittal Process

- **WebSDR uses business rule logic developed by the DoD Components to determine the most appropriate activity to receive the SDR for action. These rules vary according to the multiple factors, such as:**
 - **The specific Service or Agency functioning as the Source of Supply (SoS)**
 - **Who shipped the material - vendor or Distribution Depot (DD)**
 - **Method of payment (e.g., EMALL purchase card)**
 - **Even the specific discrepancy code**
- **You may override the pre-filled information because there might be situations which cannot be built into system processing. But, use caution in doing so. Your Service or Agency procedures should always be applied to the SDR process.**
- **Where pre-fill information is not available, you will have to manually key in the remaining SDR data. If you can identify the DD from shipping documentation, you may direct your SDR to the DD or you may identify the SoS as the action activity. Both the DD and the SoS are able to forward your SDR if misdirected, but this may require extra processing time. You will be notified if your SDR is forwarded.**

Skip this area unless you have a specific reason

Transportation Control Number (TCN) should always be included when available. Other transportation numbers are optional.

Always include the Contract Number for direct vendor delivery (DVD) shipments (SDR Document/Shipment Type=6) if not pre-populated.

Drop Down Menu

Unique identification should be included for items which are tracked under the UIT program. This area will be updated later to reflect data elements associated with new DOD UID program policy.

The next screen allows you to enter additional information associated with the discrepancy such as transportation, procurement, and/or unique identification (UID) information. WebSDR will auto-fill as much historical information as available. Drop down menu's will assist you in entering other related information. Skip over any information which is not required or applicable.

What is WebSDR?

Several options are permitted to describe the item(s). One of the following is required:

- NSN / FSC and NIIN
- CAGE and Part Number
- Part Number and Description

If material identification is not auto-filled, you must populate this area with material identification as requisitioned. You don't need to provide extra information unless required by your Service rules.

The default setting "Shipped" is appropriate for U.S. Military customers.

Condition code shipped/ billed & condition code actually received are only required for condition discrepancies. Use drop box to select appropriate code.

This is the important shipment, receipt, and discrepancy data screen. WebSDR will auto-fill information, as available, from DAAS historical records. You will key enter the actual shipped, received, and discrepant quantities. If applicable to the type of discrepancy, you will need to select the shipped and received condition codes.

Did you notice the red "R" boxes above? These indicate required information fields. You will not be able to proceed unless this information is provided.

Supply Discrepancy Reporting (WebSDR)
Submittal for Requisition M99A1472210011

Action Code **Action code drop down menu view**

Select appropriate action/requested disposition from list.

Select appropriate action/requested disposition from list.

1A - Disposition instructions requested.

1B - Material being retained.

1C - Supporting supply documentation requested.

1D - Material still Required. Expedite shipment (Not applicable to SA).

1E - Local purchase material to be returned at supplier's expense unless disposition in 15 days (Not SA, DLA).

1F - Replacement shipment requested (Not SA).

1G - Reshipment not required. Item to be Re-requisitioned.

1H - No action required. Information only.

1Z - Other action (Specify in Remarks block).

2A - Disposition of material and financial adjustment (credit) requested.

2B - Material being retained. Financial adjustment (debit) requested.

2C - Technical documentation/data.

2F - Material being held for disposition, funds cite (Not SA).

2J - Financial adjustment requested.

2K - Evidence of shipment requested (SA only).

2L - Request billing status (SA only).

2Z - Additional information is being submitted off-line.

After completing previous screen, WebSDR will ask what action you would like taken to resolve your discrepancy. You must select one of the action codes from the drop down menu.

You may upload supporting images/files, such as pictures, shipping documents, PDF files, etc., from your computer. If this is not possible, but you have hard copy information you would like included, check the box indicating additional information will be provided off line. This separate information may now be mailed or faxed to the action point (include a printed copy of the completed SDR).

A successful submission will provide an email action copy to DoD Components which are not yet capable of receiving SDR transactions. Transaction enabled systems will receive SDR transactions in lieu of email.

WebSDR-input reports will trigger creation of a distribution copy to the POC address (from previously entered POC information) as a confirmation of the SDR submission. You may use these to maintain a file of soft copy SDRs.

WebSDR will also provide copies to any distribution addresses identified.

Supply Discrepancy Reporting (WebSDR)

What is DoD WebSDR?

This is the Department of Defense's Supply Discrepancy Reporting (SDR) system created by the Defense Logistics Agency (DLA). The Defense Automatic Addressing Service Center (DAASC) is responsible for the development and support of this project.

The goal of WebSDR is to move SDRs into an integrated transactional environment thereby providing an effective means to report and measure discrepancy related data and pipeline performance and to help achieve near real time SDR reporting, enable Perfect Order Fulfillment computations, facilitate interoperability internal and external to DoD, and maximize the economy, efficiency, effectiveness of the reporting process.

Comments ?

Reply Comments Type: REPLY COMMENTS

Use this option only when you need to correct an erroneously assigned discrepancy code

As you continue scrolling down the page, you will notice the reply discrepancy code(s) are pre-filled from the original SDR as reported by the customer. Although it is not usually necessary, the action activity is permitted to correct the discrepancy code, should the customer have used the wrong code to identify the discrepant shipment. Notice the POC information is pre-filled using the information derived from the System Access Request (SAR).

WebSDR provides a final review prior to processing. Here you can review or edit your response before transmitting it to the SDR initiating activity.

The response action is still not completed until you click on "SUBMIT."

Action Activity Response - Email

- DoD WebSDR will forward an email reply to the submitter.
- The email reply is triggered by a WebSDR prepared reply (as just illustrated) or a transactional reply forwarded to WebSDR from a Component SDR processing system.
- A distribution copy is provided to the reply originator when prepared on the web.
- Additional distribution copies are forwarded to parties identified on the original SDR.

Follow-on Actions

Follow-on Actions

- DoD WebSDR is designed to assist customers in completing routine follow-on actions related to SDR submission.
- These include:
 - **Follow-up on Delinquent SDRs.** Requests an update from the action activity when reply not received. Processes as original report if original report was never received.
 - **Update/Correction.** Allows the customer to correct erroneous information on a prior submission.
 - **Cancellation.** Cancels a prior submission determined to be unnecessary or erroneous.
 - **Request for Reconsideration.** Allows the customer to provide additional supporting information when the action activity reply is not considered appropriate or just.

How to Follow-up on a Delinquent SDR Reply

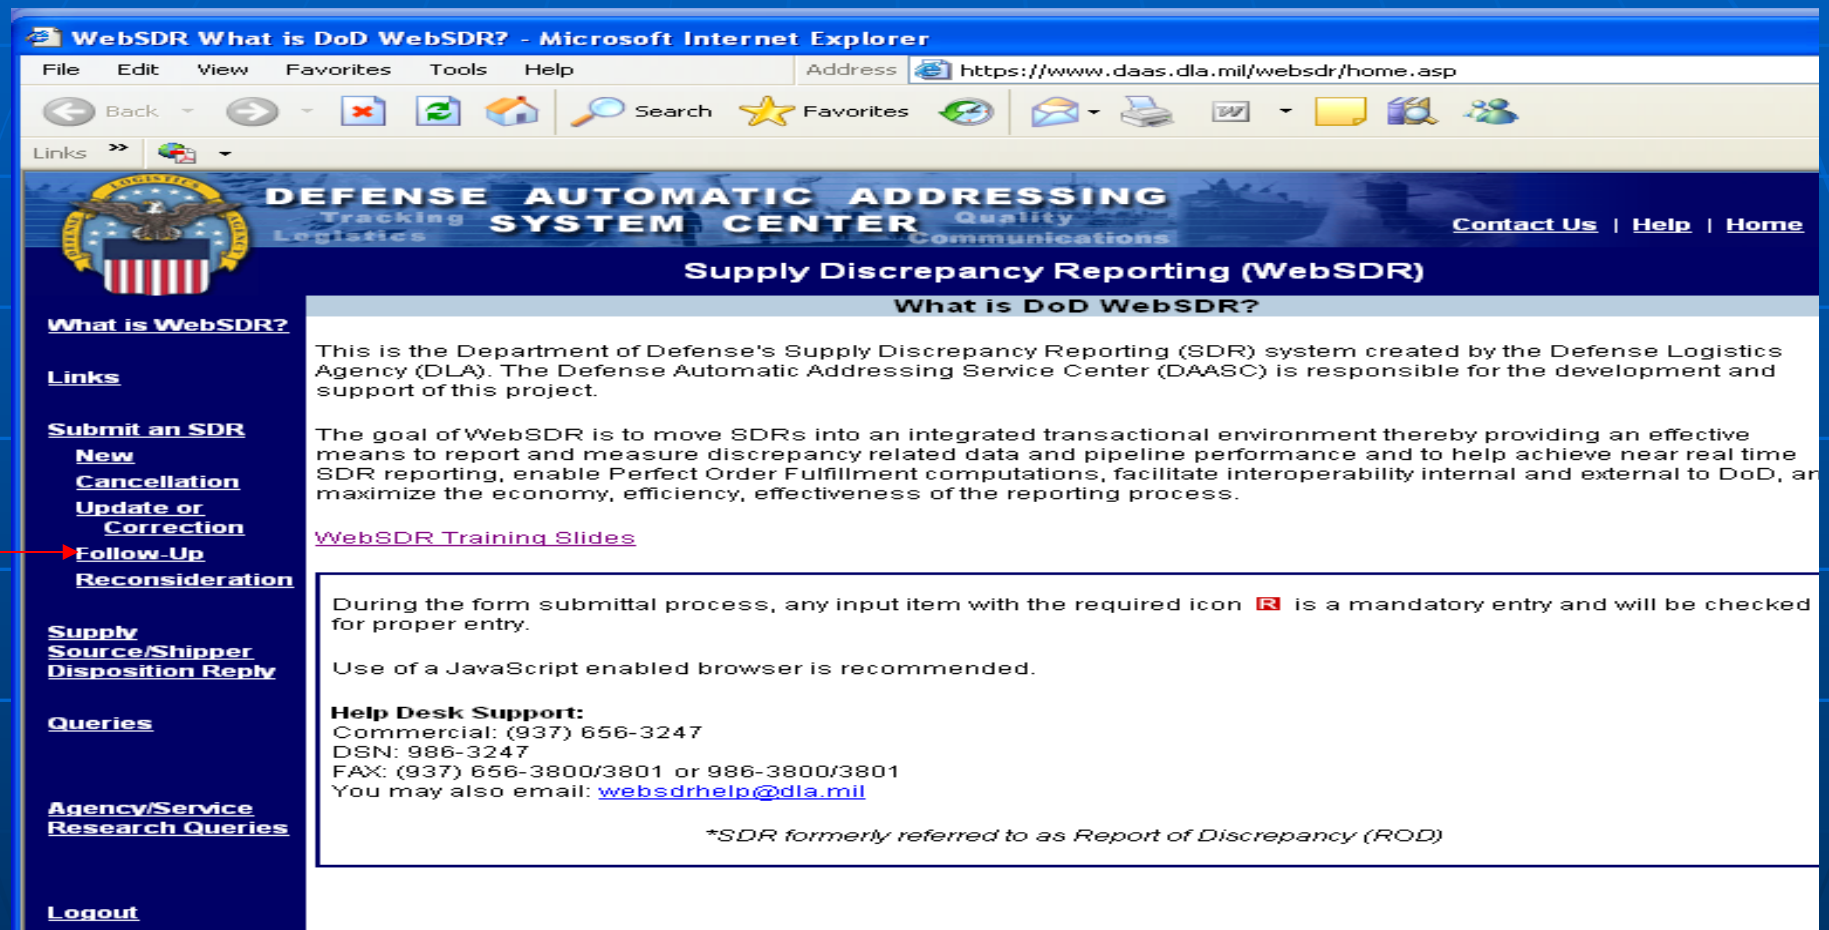

Follow-up on a Delinquent SDR Reply

- When the action activity has not responded to an SDR within the expected timeframe, use the follow-up to request status.
- Action points will generally provide interim and final replies in a timely manner well within the authorized timeframe. However, by official guidance, the action activity is permitted:
 - 30 days from date of SDR receipt for controlled inventory discrepancies
 - 30 days from date of SDR receipt for total nonreceipt discrepancies
 - Otherwise, 55 days from date of SDR receipt.
- Do not initiate a follow-up until the action point's response timeframe has elapsed.

Follow-up on a Delinquent SDR Reply

- Do not follow up a second time!
- If you do not receive a reply to your follow-up within 30 days, contact the action activity directly.
 - For Distribution Depot shipments, contact the Defense Distribution Center at DDC.ISDR@dla.mil.
 - For DLA sponsored shipments, contact the DLA Customer Interaction Center (CIC) at dlacontactcenter@dla.mil or 1-877-352-2255 (1-877-DLA-CALL) or DSN 661-7766.

Microsoft Internet Explorer

Comments explaining the FollowUp are required

OK

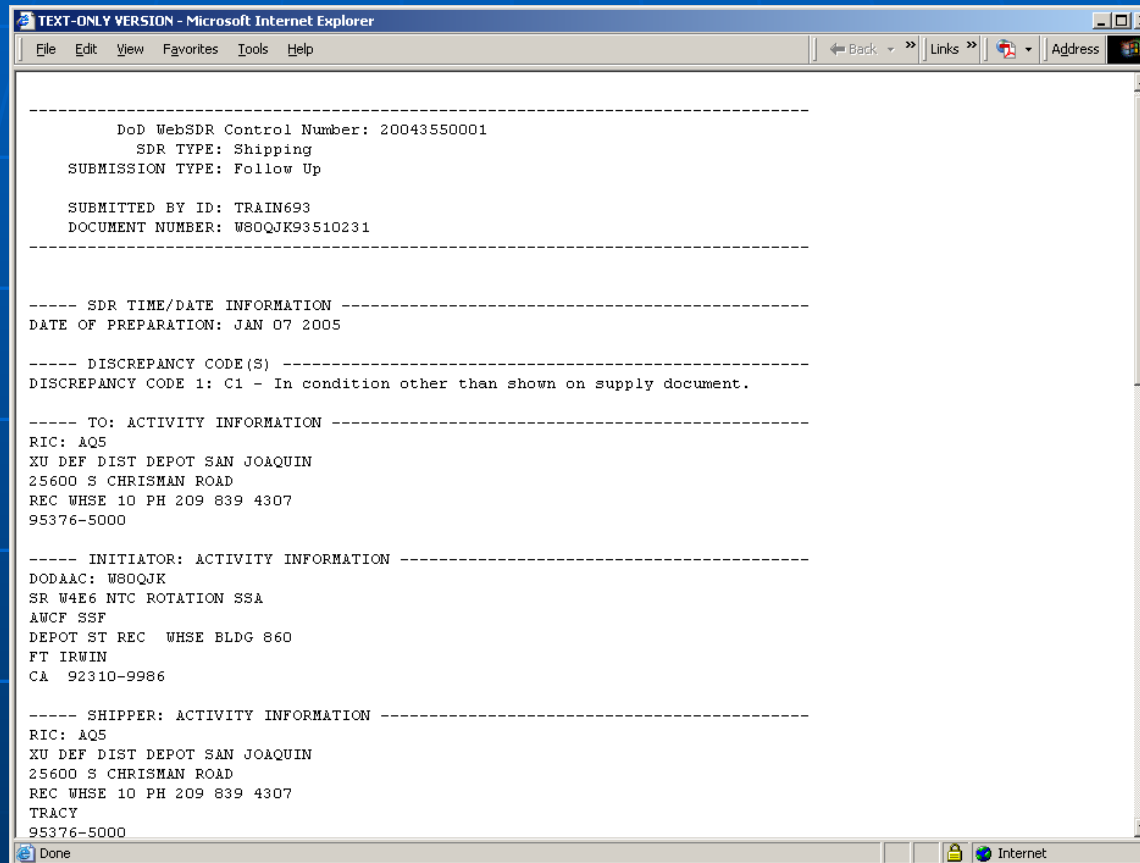

If follow up action is still appropriate, you may proceed with creation of the follow-up. You must enter comments explaining why you are submitting a follow-up. Notice your POC information is pre-filled based on your SAR. All the other SDR information from the prior submission will be carried forward to the follow-up. You must click "SUBMIT" to transmit the follow-up.

SDR Follow-Up

DoD WebSDR will confirm the follow-up action has processed.

SDR Follow-Up

DoD WebSDR will provide to the POC email address on the SDR, an email confirmation copy of the follow-up for your records.

How To Make Corrections To A Previously Submitted SDR

SDR Correction

- When an SDR is later determined to include erroneous information which might impact the proper resolution, the submitting activity should prepare an SDR correction.
- All data content in the SDR may be corrected with the exception of the controlling report numbers and the document number associated with the report.
 - If the report or document number is incorrect, you must cancel and resubmit.
- Significant corrections, such as would impact financial actions by the Source of Supply, may be reported at any time, even if corrective action is in progress.

SDR Correction

DoD WebSDR will confirm the Correction action has processed. An email confirmation will be provided to the submitter.

How To Request Reconsideration of an Unfavorable Action Activity Response

Request for Reconsideration

- When a U.S. Government reporting activity does not concur with the reply/disposition received in response to an SDR, it may request reevaluation based upon new information or greater clarification of the circumstances of the discrepancy.
- The Source of Supply will review all data relating to the problem and provide a response to the reporting activity within 45 days. This decision will be final.
- Bear in mind that this is an exception process and should not be used when not warranted!

Security Assistance Request for Reconsideration

- A Foreign Military Sales (FMS) customer will work with their International Logistics Control Office (ILCO) to obtain reconsideration.
 - The customer must submit a request for reconsideration to the ILCO within 90 days from the date the ILCO forwarded the SDR response.
 - The ILCO is permitted 30 days for review and processing.
 - The Source of Supply will review all data relating to the problem and provide a response to the ILCO within 60 days.

- When an initial Request for Reconsideration has not produced the desired result, the FMS customer may officially contest the reconsideration decision.
 - The customer must contest the decision within 90 days.
 - The ILCO is permitted 15 days for review and processing.
 - The Source of Supply or designated focal point will review all data and provide a response to the ILCO within 60 days.

Request for Reconsideration

Supply Discrepancy Reporting (WebSDR)

What is DoD WebSDR?

This is the Department of Defense's Supply Discrepancy Reporting (SDR) system created by the Defense Logistics Agency (DLA). The Defense Automatic Addressing Service Center (DAASC) is responsible for the development and support of this project.

The goal of WebSDR is to move SDRs into an integrated transactional environment thereby providing an effective means to report and measure discrepancy related data and pipeline performance and to help achieve near real time SDR reporting, enable Perfect Order Fulfillment computations, facilitate interoperability internal and external to DoD, and maximize the economy, efficiency, effectiveness of the reporting process.

DoD WebSDR will confirm the reconsideration request has processed.
An email confirmation copy will be returned to the submitter.

How To Cancel A Previously Submitted SDR

SDR Cancellation

- When a submitting activity later determines a SDR to be invalid, it must be cancelled. This occurs when the reported discrepancy information is no longer considered to be accurate or the SDR cannot be corrected. Example:
 - Missing shipment quantity is located
 - Wrong document number was identified
- The action activity may be notified of SDR cancellation at any time, even if corrective action is already in progress.

How To Perform Queries Against SDR History Records

SDR Queries

- Query capability is available on DoD WebSDR
 - All currently available queries retrieve individual SDR records from the DAAS history which match on the search criteria entered by the user.
 - These queries allow the user to review actions related to a specific SDR.
 - Agency/Service Research Queries are available to view formatted transactions generated by DoD WebSDR for Component system interface point of contacts.
- DoD WebSDR is in the process of developing report capabilities. As additional requirements are identified they will be developed in future releases as determined by the SDR Sub-Committee (PRC). These reports will assist those individuals and activities that are engaged in the research and resolution of specific Supply Discrepancy Reports SDRs and provide analysis tools to manage SDR workload and determine broader policy, procedures, or training changes that will improve customer satisfaction by reducing future discrepancies.

Queries

- [Composite View](#): Composite View of the entire SDR
- [By DoD Control Number \(transactions\):](#) Query by the DoD Control Number (returns all transactions)
- [By Document Number](#): Query by Document Number
- [By Document Number Activity](#): Query by Activity - 1st 6 Positions of the Document Number
- [By Other Control Number](#): Query by Service/Agency or Customer control number
- [By NSN](#): Query by National Stock Number
- [By TCN](#): Query by Transportation Control Number
- [By Action Activity](#): Query by Action Activity
- [By Initiating Activity](#): Query by Initiating Activity

UNDER CONSTRUCTION

Future releases will enhance the query search criteria and include additional SDR Reporting Capability

The first option "Composite View" is a new report feature in DoD WebSDR and is accessible, but still in development. The other options are queries available by DoD WebSDR control number, Document Number, Document Number Activity, Other Control Numbers, NSN or Transportation Control Number (TCN), Action Activity, and Initiating Activity. Each of these will retrieve all individual SDR records associated with the number provided by the user.

Supply Discrepancy Reporting (WebSDR)

What is DoD WebSDR?

This is the Department of Defense's Supply Discrepancy Reporting (SDR) system created by the Defense Logistics Agency (DLA). The Defense Automatic Addressing Service Center (DAASC) is responsible for the development and support of this project.

The goal of WebSDR is to move SDRs into an integrated transactional environment thereby providing an effective means to report and measure discrepancy related data and pipeline performance and to help achieve near real time SDR reporting, enable Perfect Order Fulfillment computations, facilitate interoperability internal and external to DoD, and maximize the economy, efficiency, effectiveness of the reporting process.

[Who submitted this SDR?](#)
Searches the temporary database for the user ID and POC information for that SDR. This information is only around for 2 weeks.

[SDR Processing History](#)
Displays the processing that was done on a DoD Control Number. This log stays around for 1 year.

“Who submitted this SDR?” query will show the initiator POC information. The transmission history query will display processing details for transactions associated with a specific document number.

SDR Reports

- SDR Reporting requirements have been organized by HQ DLA and have been reviewed by all component POCs. Development is underway based on information outlined in the SDR Reporting Functional Requirements Document. Future reports will be designed to:
 - Show Summary Views and Composite Views
 - Enable monitoring of trends
 - Establish volume and dollar value of SDRs
 - Measure compliance with SDR timeframes

Future Enhancements

- The development team is investigating how to incorporate financial system interfaces to associate credit/debit actions with SDRS and facilitate financial follow-ups.
- The DoD Stock Readiness Committee is considering applying WebSDR functionality to Storage Quality Control Reports (DD 1225).

WebSDR Summary

- The DoD WebSDR is offered as a multi-purpose tool to facilitate SDR processing within the Department.
- Your Service or Agency may direct use of other automated support tools instead of, or in addition to, DoD WebSDR.
- Additional system interfaces are connecting, such as SDR Air Force, Army, and Navy processing systems, with DAAS/WebSDR (reducing reliance on email).
- Ultimately, the WebSDR will have visibility of SDRs DoD-wide.

WebSDR Summary

- We hope your experience with DoD WebSDR will be satisfactory. If you do encounter a problem, remember to use the DAAS help line or email to report errors or make suggestions for future enhancements.
